# Meeting Agenda

Location: 3507

Date: 10-05-11

Time: 13:15

Facilitator: Jonas Jacobsson & Christian Bergström

Participants: Jonas Jacobsson & Christian Bergström

1. Objectives (5 min)

   Progress report.

2. Reports (15 min)

   Further improvements to the AI and renderer.

3. Discussion items (35 min)

   The AI is getting pretty huge, and could do with an overhaul. Doing something with a priority queue would be preferable. However, Javas priority queue doesn't work the way we need it to. We'll probably have to write a wrapper class of some sort.

4. Outcomes and assignments (5 min)

   Figure out what the wrapper actually has to do and implement it. Keep tinkering with the renderer. A background would be preferable to the black void we currently have. Fix it.

5. Wrap up

   Next meeting: 10-05-13.
